Session 1

Supervising for Safety, Session 1

Knowledge and Competency Framework (KCF) Content Area and CDA Content Areas
The Primary Knowledge and Competency Content Areas and the CDA Content Areas are listed here to help participants understand what competencies, content areas and/or indicators are addressed in the training.

KCF Content Area: Health, Safety and Nutrition; Professionalism
CDA Content Area: Safe and Healthy Environments

Learning Objectives
- Identify MN Rule 2 licensing standards and best practices of supervision
- Examine and address supervision challenges experienced in family child care programs
- Identify three interaction techniques to utilize while supervising

Supervision

Rule 2 Definition
A caregiving being within sight or hearing of an infant, toddler or pre-schooler at all times so that the caregiver is capable of intervening to protect the health and safety of the child. For the school-age child, it means a caregiver being available for assistance and care so that the child’s health and safety is protected.

Caring for Our Children Standards
Caregivers should supervise infants, toddlers and preschoolers by sight and hearing, even when children are going to sleep, napping or sleeping, are beginning to wake up, or are indoors or outdoors. School age children should be within sight or hearing at all times.

Effective Supervision Is:

- Proactive
- Dynamic
- Positive

Factors to Consider when Supervising:

- Understand the developmental skills and abilities of each child
- Establish clear, simple safety rules and teach those to children
- Maintain awareness of potential safety hazards
- Have a plan for where supervision of children can be done most effectively to reduce problem behaviors and make sure children are safe. Can the provider see and hear every child from where they are in the space?
- Use positive language and proactive strategies to promote safety with the children

Session 1 - Assignments

• Examine your program through the eyes of a child. Get down to a child level (i.e. on knees, sitting on floor, lying on stomach, etc) and look around. What do you see? What can you touch? What is accessible? What is not? Look at the walls, shelves, furniture arrangements. Are there blind spots, hiding locations, or potential supervision issues? Write down your observations.

• Go to the Consumer Product Safety Website and check to see if any equipment or materials you have in your environment are on the recall list. http://www.cpsc.gov/

• Self-Care Assignment – please take a minimum of 30 minutes to take care of yourself, pamper yourself, or release your stress between now and the next time we meet.

Reflection

Take a few minutes to reflect on what you have learned in this session of this class. Use the spaces below to capture your ideas and plans for action.

In this session, I learned these 3 ways to provide active supervision...

Based on what I learned, some things I plan to do ...

This session started me thinking about...

Supervising for Safety, Session 2

Knowledge and Competency Framework (KCF) Content Area and CDA Content Areas
The Primary Knowledge and Competency Content Areas, and the CDA Content Areas are listed here to help participants understand what competencies, content areas and/or indicators are addressed in the training.

KCF Content Area: Health, Safety and Nutrition; Professionalism
CDA Content Area: Safe and Healthy Environment

Learning Objectives
- Identify MN Rule 2 Licensing Standards and best practices around indoor and outdoor supervision; discuss where there are differences
- Examine and address environmental supervision challenges experienced in family child care program
- Identify three ways to be proactive in the environment

RISK REDUCTION QUIZ

1. The water temperature in sinks and tubs accessible to children must not exceed _______ degrees Fahrenheit to prevent children from scalding themselves while washing.
   110  120  130  None of the above – children must only use cold water
2. True or False  Stairways of three or more steps must have handrails.
3. True or False  The open area between the handrail and stair tread must be enclosed with a protective guardrail. The back of the stair risers must be enclosed.
4. Gates or barriers must be used on stairs when children between what ages are in care?
   4 and 12 months  5 and 15 months  6 and 18 months
5. True or False  Stairways must be well-lighted, in good repair, and free of clutter and obstructions.
6. True or False  Diapering must not take place in food preparation areas.
7. All food and cooking utensils must be stored to protect them from:
   Dust  Vermin  Pipe leakage  Other contamination
   None of the above  All of the above
8. True or False  Appliances used in food storage and preparation must be safe and clean.
9. True or False  Pet cages must be located and cleaned away from any food preparation, storage, or serving areas.
10. True or False  All medicines, chemicals, detergents, poisonous plants, alcoholic beverages, and other toxic substances must be inaccessible to children.
11. Toilet training chairs, chairs, stools, and seats must be washed with soap and water when soiled, and at least _______:
   Hourly  Every morning and afternoon  Daily  Weekly
12. True or False  Every bathroom door lock must permit opening of the locked door from the outside and the opening device must be readily accessible to all caregivers.
13. True or False  All electric receptacles accessible to children under first grade must be tamper-proof or shielded when not in use.
14. True or False  All major electrical appliances must be properly installed, grounded in accordance with the state electric code, and in good working order.
15. True or False  Extension cords can be used as a substitute for permanent wiring.
16. True or False  Extension cords and flexible cords can be affixed to structures, extended through walls, ceilings, floors, under doors or floor coverings, and be subjected to environmental damage or physical impact.
17. True or False  Electrical wiring must be sized to provide for the load and be in good repair.
18. True or False  Excess accumulations of storage (clutter) can cause fire loading, entrapment, or difficulty in removing victims from an emergency situation.
19. True or False  Window blinds can cause a strangulation hazard. Best practice is to use cordless or inaccessible cord window coverings, and not to place beds, cribs and furniture near windows.
20. True or False  Furniture hazards may include tipping and upholstered furniture fires. Best practice is to anchor furniture to the wall or floor. Place TVs and other large equipment on low, sturdy bases. Keep heat sources (cigarettes, space heaters, etc) away from upholstered furniture.
THINKING AHEAD IN OUTDOOR ENVIRONMENTS

- Equipment Safety
- Boundaries
- Water Hazards
- Daily Safety Checks
REFLECTION - ENVIRONMENTAL HAZARDS

Think about pets, hazardous materials and contaminants, poisonous plants, and pest control. Identify hazards and actions to take.

SESSION 2 - ASSIGNMENTS

- Using the 5 hazards listed on the risk reduction plan in the self-reflection task, identify at least 1 way to address each hazard. Use Rule 2 as a reference guide to determine if any of the hazards are addressed by licensing requirements
- Create a list of at least 10 items to include in an emergency survival kit
## INDOOR/OUTDOOR RISK REDUCTION PLAN

Identify at least 5 hazards in the indoor or outdoor spaces. For each hazard, complete at least 1 action to take. Research Rule 2 to determine if any of the hazards are addressed by licensing requirements.

Session 3

Supervising for Safety, Session 3

Knowledge and Competency Framework (KCF) Content Area and CDA Content Areas.
The Primary Knowledge and Competency Content Areas and the CDA Content Areas are listed here to help participants understand what competencies, content areas and/or indicators are addressed in the training.

KCF Content Area: Health, Safety and Nutrition; Professionalism
CDA Content Area: Safe and Healthy Environment

Learning Objectives
- Identify or determine supervision needs during emergencies or disasters
- Identify resources for emergency preparedness, including disasters and health emergencies
- Identify actions to take before, during, and after health related events

</tbody>
</table>
Starting Sept. 30, 2019, you will need to update your emergency preparedness plan to include accommodations for infants and toddlers. After Sept. 30, 2019, the plan must be updated and include how you will accommodate infants and toddlers in an emergency. The initial emergency preparedness plan form developed by the commissioner does not include this, because it is a new requirement. In order to comply, you can do one of two things: • complete a one-page update developed by DHS that includes the new requirement or • complete a new emergency plan. DHS received feedback from providers that the form was too long and repetitive. In response, DHS revised and shortened the required template. You no longer need to post or share your emergency preparedness plans with parents or guardians. However, you must continue to make the plan available for review. You can find the one-page update here:
https://edocs.dhs.state.mn.us/lfserver/Public/DHS-7955-ENG
You can find the updated emergency preparedness plan, which will be available after Sept. 20, 2019 here: https://edocs.dhs.state.mn.us/lfserver/Public/DHS-7414C-ENG

SECURITY ASSESSMENT

Think about security in your home and community. What do you have in place?

What are some strategies you have thought about or pursued?

PREVENTION AND CONTROL OF INFECTIOUS DISEASE

• Clean – to physically remove all dirt and contamination before sanitizing or disinfecting.

• Sanitize – reduce (but not eliminate) germs on inanimate surfaces. Generally it is appropriate to sanitize toys, food contact surfaces and pacifiers using ¼ tsp bleach to 1 quart of water

• Disinfect – destroys or inactivates germs on inanimate objects. Generally it is appropriate to disinfect hard, non-porous surfaces like diaper changing tables, door handles, toilets, and other bathroom surfaces. Rule 2 requires diapering surfaces to be cleaned with soap and water and then disinfected with a solution of at least 2 tsp chlorine bleach to 1 quart of water.

MEDICATION ADMINISTRATION

What are some best practices and requirements for medication administration?
SESSION 3 – REFLECTION

How to Prepare for Emergencies
